in many electronic systems such as telecommunication or measurement systems oscillations play an essential role in the information processing each electronic system poses different requirements on these oscillations depending on the type and performance level of that specific system it is the designer s challenge to find the specifications for the desired oscillation and to implement an electronic circuit meeting these specifications as the desired oscillations have to fulfill many requirements the design process can become very complex to find an optimal solution the designer requires a design methodology that is preferably completely top down oriented to achieve such a methodology it must be assured that each property of the system can be optimized independently of all other properties oscillators and oscillator systems classification analysis and synthesis takes a systematic approach to the design of high performance oscillators and oscillator systems a fundamental classification of oscillators based on their internal timing references forms the basis of this approach the classification enables the designer to make strategic design decisions at a high hierarchical level of the design process techniques derived from the systematic approach are supplied to the designer to enable him or her to bring the performance of the system as close as possible to the fundamental limits oscillators and oscillator systems classification analysis and synthesis is an excellent reference for researchers
